EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property. Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STATE AND LOCAL RECORDS

SHWS: Contains information on releases of oil and hazardous materials that have been reported to DEP.

A review of the SHWS list, as provided by EDR, and dated 05/01/2007 has revealed that there are 24 SHWS sites within approximately 1 mile of the target property.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

RCRA: Resource Conservation and Recovery Act Information

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. RCRAInfo replaces the data recording and reporting abilities of the Resource Conservation and Recovery Information System (RCRIS). The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Conditionally exempt small quantity generators (CESQGs) generate less than 100 kg of hazardous waste, or less than 1 kg of acutely hazardous waste per month. Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month. Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month. Transporters are individuals or entities that move hazardous waste from the generator off-site to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities—especially those without EPA Brownfields Assessment Demonstration Pilots—minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients—States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specially databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

Oil/Gas Pipelines: This data was obtained by EDR from the USGS in 1994. It is referred to by USGS as GeoData Digital Line Graphs from 1:100,000-Scale Maps. It was extracted from the transportation category including some oil, but primarily gas pipelines.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

Target Property Map:	42071-C2 NEWTON, MA
Most Recent Revision:	1987

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

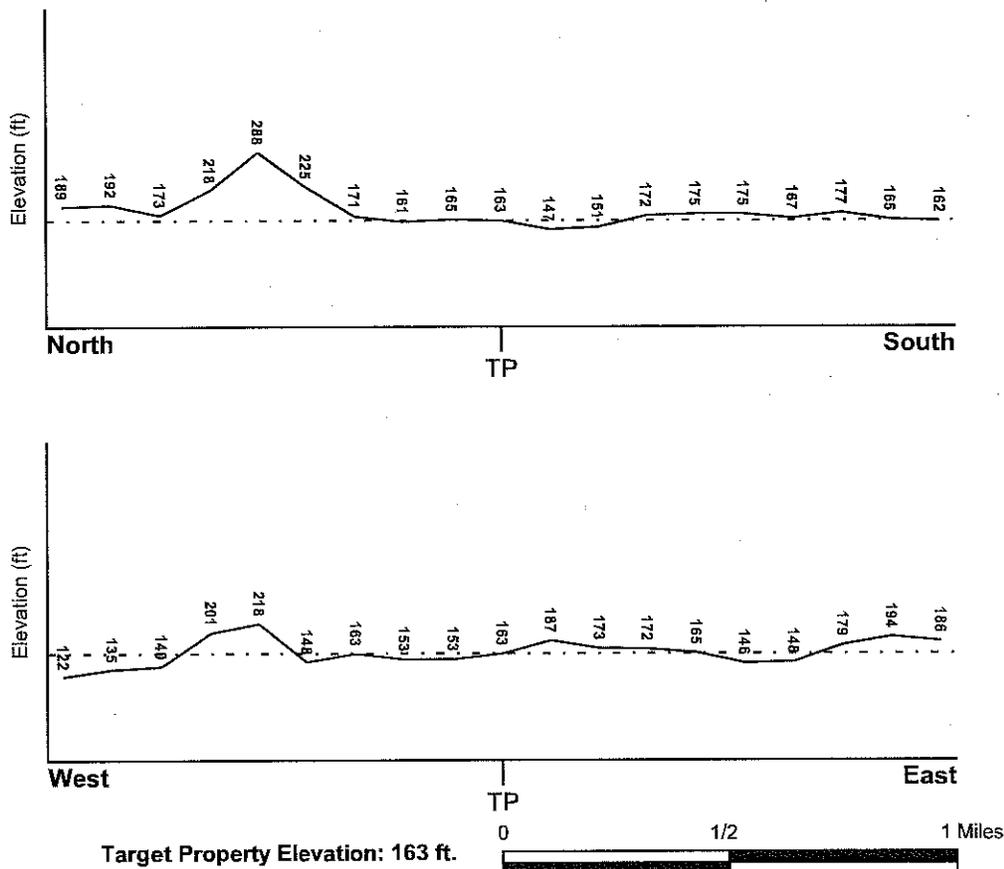

TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General WSW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: CHARLTON

Soil Surface Texture: very stony - fine sandy loam

Hydrologic Group: Class B - Moderate infiltration rates. Deep and moderately deep, moderately well and well drained soils with moderately coarse textures.

Soil Drainage Class: Well drained. Soils have intermediate water holding capacity. Depth to water table is more than 6 feet.

Hydric Status: Soil does not meet the requirements for a hydric soil.

Corrosion Potential - Uncoated Steel: LOW

Depth to Bedrock Min: > 60 inches

Depth to Bedrock Max: > 60 inches

Soil Layer Information							
Layer	Boundary		Soil Texture Class	Classification		Permeability Rate (in/hr)	Soil Reaction (pH)

The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database

Source: Department of Agriculture, Natural Resources Conservation Services (NRCS)

Telephone: 800-672-5559

SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Services, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)

This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

STATE RECORDS

Massachusetts Geographic Information System (MassGIS) Datalayers

Source: Executive Office of Environmental Affairs

Public Water Supply Database: The Public Water Supply datalayer contains the locations of public community surface and groundwater supply sources and public non-community supply sources as defined in 310 CMR 22.00.

OTHER STATE DATABASE INFORMATION

Areas of Critical Environmental Concern Datalayer: The Areas of Critical Environmental Concern (ACEC) datalayer shows the location of areas that have been designated ACECs by the Secretary of Environmental Affairs. ACEC designation requires greater environmental review of certain kinds of proposed development under state jurisdiction within the ACEC boundaries. The ACEC Program is administered by the Department of Environmental Management (DEM) on behalf of the Secretary of Environmental Affairs. The Massachusetts Coastal Zone Management (MCZM) Office managed the original Coastal ACEC Program from 1978 to 1993, and continues to play a key role in monitoring coastal ACECs. Procedures for ACEC designation and the general policies governing the effects of designation are contained in the ACEC regulations (301 CMR 12.00). The ACEC datalayer has been compiled by MCZM and DEM and includes both coastal and inland areas.

EPA Designated Sole Source Aquifers Datalayer: The Sole Source Aquifer datalayer was compiled by the Department of Environmental Protection (DEP) Division of Water Supply (DWS). Seven Sole Source Aquifers have been designated by the US Environmental Protection Agency (EPA) for Massachusetts. A Sole Source Aquifer (SSA) is an aquifer designated by US EPA as the sole or principal source of drinking water for a given aquifer service area; that is, an aquifer which is needed to supply 50% or more of the drinking water for that area and for which there are no reasonably available alternative sources should that aquifer become contaminated. The aquifers were defined by a EPA hydrogeologist.

Aquifers Datalayer: MassGIS produced an aquifer datalayer composed of 20 individual panels, generally based on the boundaries of the major drainage basins. Areas of high and medium yield were mapped. This datalayer includes polygon attribute coding to help in the identification of areas in which cleanup of hazardous waste sites must meet drinking water standards, as defined in the Massachusetts Contingency Plan (MCP) (310 CMR 40.00000).

Non-Potential Drinking Water Source Areas: Non-Potential Drinking Water Source Areas (NPDWSA) are regulatory in nature, representing one of many considerations used in determining the standards to which ground water must be cleaned in the event of a release of oil or hazardous material. NPDWSAs are not based on existing water quality and do not indicate poor ambient conditions.

DEP Approved Zone IIs Datalayer: The Department of Environmental Protection (DEP) approved Zone IIs datalayer was compiled by the DEP Division of Water Supply (DWS). The database contains 281 approved Zone IIs statewide. As stated in 310 CMR 22.02, a Zone II is "that area of an aquifer which contributes water to a well under the most severe pumping and recharge conditions that can be realistically anticipated (180 days of pumping at safe yield, with no recharge from precipitation.) It is bounded by the groundwater divides which result from pumping the well and by the contact of the aquifer with less permeable materials such as till or bedrock. In some cases, streams or lakes may act as recharge boundaries. In all cases, Zone IIs shall extend up gradient to its point of intersection with prevailing hydrogeologic boundaries (a groundwater flow divide, a contact with till or bedrock, or a recharge boundary)." These data are used in association with the Public Water Supplies datalayer. The following describes certain unique features of this association.

- Any proposed new well which will pump at least 100,000 gallons per day must have a Zone II delineation completed and approved by DEP prior to the well coming on line.
- Additionally, a new source may not be on-line yet, but other, older wells may fall within its Zone II boundary.
- Further, existing wells must have a Zone II delineated as a condition of receiving a water withdrawal permit under the Water Management Act.

Dear Freedom of Information Officer:

Property Solutions Inc. is conducting a Phase I Environmental Assessment of the aforementioned property. As part of a property assessment, we wish to determine whether government agencies possess records on the subject property that may include potential environmental concerns. We request information on the following:

- Outstanding fire code violations
- Fires or spills
- Outstanding building code violations
- Permits for Underground or Aboveground Storage Tanks (UST/AST), installation or removal
- Demolition/renovation permits

If you have any questions, please call me at 732-417-0999, or email me at tbiercz@propertyolutionsinc.com. If you have no information on the property, please fill in the box below and fax back to me at 732-417-0888. Thank you for your assistance.

CHESTNUT HILL REALTY CORP. MOLD/MILDEW POLICY AND PROCEDURES

Floods, leaks from plumbing, roof leaks, sprinkler systems, or condensation can cause unintentional wetting of residential and office surfaces. Microbial growth will begin on these surfaces quickly, usually within 24 hours. Individuals with respiratory problems, asthma and allergies are more susceptible to health problems when exposed to mold than others. Therefore, it is crucial to take IMMEDIATE action to minimize the growth of molds and fungi. After controlling the water source, follow these guidelines to resolve the problem quickly.

Decontamination Procedure

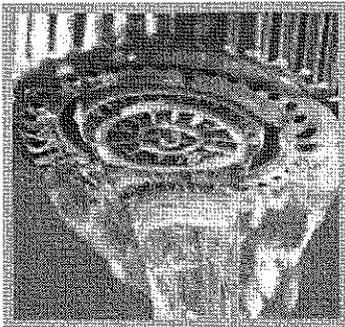

1. Inventory all flooded areas so that every water damaged area is identified, treated and cleaned.
2. Remove and dispose of all wet ceiling tiles and drywall within 24 hours of water contact.
3. Remove and replace all drywall and insulation up to 12 inches above the water line.
4. Dry all wet light fixtures.
5. Water damaged furniture, including wood, should be replaced or cleaned with a 10% bleach solution. Note: Be sure to verify that bleach will not discolor or damage surfaces before application. When doubt, test a small hidden area before application. Furniture made of or with particle board should be discarded. Treat fabrics as you would carpeting (see below).
6. Leave all cabinets and drawers open to facilitate air flow for drying. Treat surfaces of cabinets and drawers with the dilute bleach solution as well.
7. Remove and discard all non-essential wet files and paper. Remove essential paper to a location where it can be dried, copied and discarded.
8. If a large amount of paper cannot be dried within 24 hours, essential files can be rinsed with clean water and temporarily frozen until proper drying takes place.
9. IMMEDIATELY remove as much water as possible from wet carpeting using a water vacuum.
10. After vacuuming, shampoo the carpet with an antibacterial solution.
11. Rinse the carpet with clean water to remove the solution, and assure that the carpet is totally dry within 12-24 hours of treatment.
12. When using any kind of bleach solution, increase air circulation and ventilation.
13. USE DEHUMIDIFIERS AND AIR CONDITIONING TO SPEED THE DRYING PROCESS.
14. Verify that the source of contamination has been controlled to prevent future occurrences.

water conservation

Wasting water can add up quickly. On average, a family of four uses 90,000 gallons of water each year; each person uses about 65 gallons of water each day. Consumers are discovering that more efficient water use can reduce the impact on the water supply and their wallets. Here are some ways to make your home and your habits more water efficient.

Fix Leaks

A leaky faucet is easy to see. But hidden leaks in the toilet, under the sink, or behind a washing machine can waste large amounts of water and can also damage floors and ceilings. Take a reading of your water meter. Check again in an hour. If the reading has changed, you've got at least one leak. Investigate!

Install a Low-Flush Toilet

Toilets account for over a third of the water used in most homes. Installing a new ultra low-flush toilet will save thousands of gallons each year and can reduce your bathroom water use by more than half.

Install a Low-Flow Showerhead and Faucet Aerator

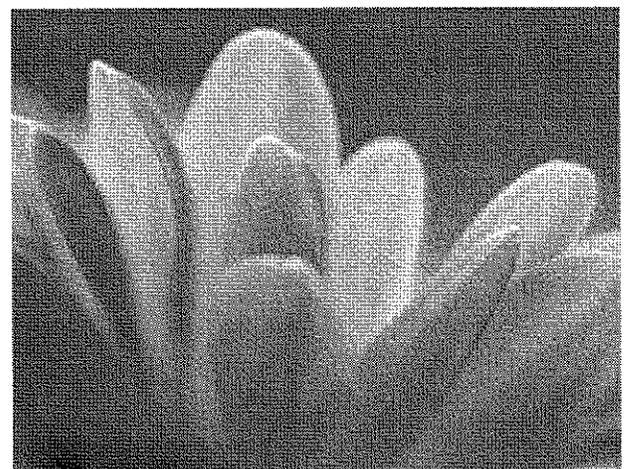

Some showerheads may still use over 5 gallons per minute. A low-flow showerhead uses 2.5 gallons or less and can save you over 20 gallons per 10-minute shower. In one year, that's over 7,000 gallons. Faucets can use 2 to 7 gallons of water per minute – a low flow-aerator can reduce the flow by about 25%.

Follow Outdoor Water Saving Ground Rules

Summer is an especially important time to save water. Water consumption can increase up to 50% in the summer months due to outdoor water use.

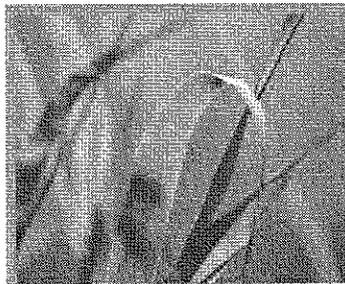

More Tips

For more water saving ideas, call 617-242-SAVE or go to www.mwra.com.

Outdoor Water Saving Ground Rules

- ☼ Water your lawn (and other landscaping) in the early morning or evening to avoid evaporation.
- ☼ Be sure sprinklers water only your lawn, not the pavement.
- ☼ Never water on a windy, rainy, or hot day.
- ☼ Never use the hose to clean debris from your driveway or sidewalk. Use a broom.
- ☼ Apply mulch around flowers to reduce evaporation, promote plant growth, and control weeds.

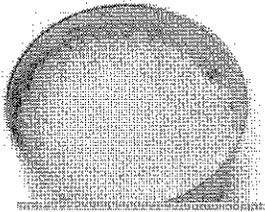

The Inch Rule

Most lawns, shrubs, vegetables, and flowers need just one inch of water per week. If there has been an inch of rainfall during the week, you don't have to water at all.

Overwatering can actually weaken your lawn by encouraging shallow roots that are less tolerant of dry periods and more likely to be damaged by insects.

important EPA and DEP information

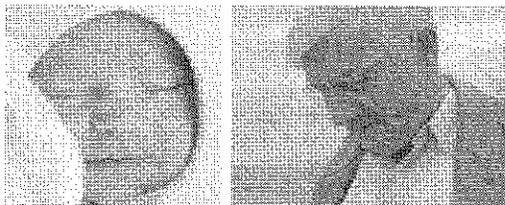

FACTS ABOUT SODIUM

Sodium in water contributes only a small fraction of a person's overall sodium intake (less than 10%). MWRA tests for sodium monthly and the highest level found was 37.1 mg/L (about 7 mg per glass). This is considered very low sodium by the FDA.

Drinking Water and People with Weakened Immune Systems:

Some people may be more vulnerable to contaminants in drinking water than the general population. Immune-compromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice about drinking water from their health care providers. EPA/CDC guidelines on appropriate means to lessen the risk of infection by *Cryptosporidium* and other microbial contaminants are available from EPA's Safe Drinking Water Hotline (1-800-426-4791).

Contaminants in Bottled Water and Tap Water

Drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. Their presence does not necessarily indicate that water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the EPA's Safe Drinking Water Hotline

(1-800-426-4791) or MWRA (617-242-5323).

In order to ensure that tap water is safe to drink, EPA and the Massachusetts DEP prescribe regulations that limit the amount of certain contaminants in water provided by public water systems. Food and Drug Administration (FDA) and Massachusetts Department of Public Health regulations establish limits for contaminants in bottled water which must provide the same protection for public health.

Research for New Regulations

MWRA has been working with EPA and other researchers to define new national drinking water standards by testing contaminants which are not regulated. Our results will be used with those of other water suppliers to help EPA set regulations if they are necessary. MWRA is also participating with Tufts University on a nationally-funded study testing for *Cryptosporidium* and *Giardia*.

lead in your tap water: what you should know

MWRA water is lead-free when it leaves the reservoirs.

MWRA and local pipes that carry the water to your community are made mostly of iron and steel, and do not add lead to water. However, lead can get into tap water through pipes in your home, your lead service line, lead solder used in plumbing, and some brass fixtures. Corrosion or wearing away of lead-based materials can add lead to tap water, especially if water sits for a long time in the pipes before use.

What is MWRA doing to lower lead levels? What can I do?

In 1996, MWRA began adding sodium carbonate and carbon dioxide to adjust the water's pH and buffering capacity. This change has made the water less corrosive, thereby reducing the leaching of lead into drinking water. Lead levels found in sample tests of tap water have dropped by over 80 percent since this treatment change. Also, local water departments are working to decrease lead corrosion by replacing existing lead service lines.

To further decrease your potential exposure, you should always use cold, fresh running water for drinking or cooking and buy plumbing fixtures that have no or low lead levels. Read the labels of any new plumbing fixture closely.

MWRA meets Lead Standard in 2005

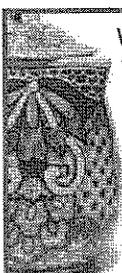

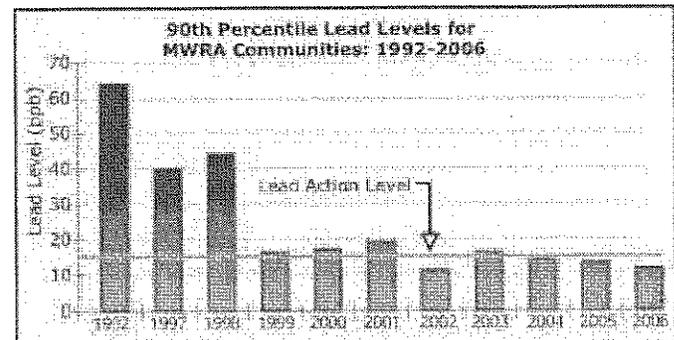

Under EPA rules, each year MWRA and your local water department must test tap water in a sample of homes that are likely to have lead levels. These are usually homes with lead service lines or lead solder. The EPA rule requires that 9 out of 10, or 90%, of sampled homes must have lead levels below the Action Level of 15 parts per billion (ppb).

Lead levels in sampled worst case homes have dramatically dropped since 1992. Results for September 2005 are shown in the table, with an overall test score meeting the 90% standard. 9 out of 10 houses were below 13.8 ppb, which is below the Action Level of 15 ppb.

Some individual communities had more than one home test above the Action Level for lead. If you live on one of these communities, your town letter on page 7 will provide you with more information.

	Units	Range	90% value	(Target) Action Level	(Ideal) Goal	# homes above AL/# homes tested
Lead	ppb	1.2-145	13.8	15	0	42/442
Copper	ppm	0.01-0.93	0.15	1.3	1.3	0/442

AL=Action Level: The concentration of a contaminant which, if exceeded, triggers treatment or other requirements which a water system must follow. Definition for MCLG available on page 4.

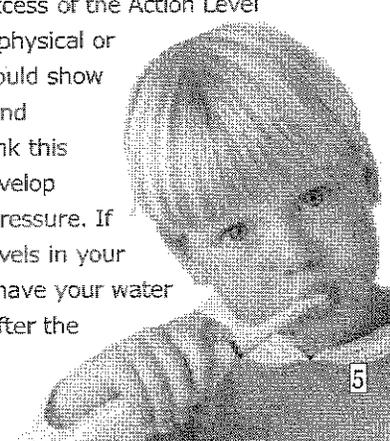

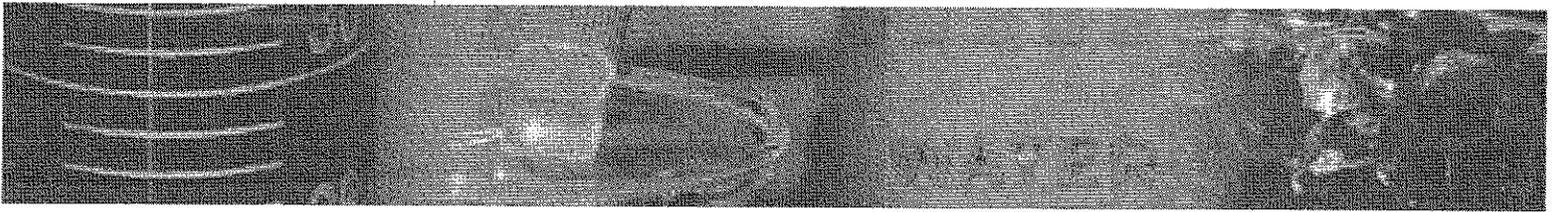

WHAT CAN I DO TO REDUCE EXPOSURE TO LEAD?

- Be careful of places you find lead in or near your home. Paint, soil, dust, and some pottery may contain lead.
- Run the tap until after the water feels cold. To save water, fill a pitcher and place in refrigerator for future use.
- Never use hot water from the faucet for drinking or cooking - especially when making baby formula or other food for infants.
- Ask your local water department if there are lead service pipes leading to your home.
- Test your tap water. Contact MWRA at 617-242-5323 or www.mwra.com for more tips and a list of certified labs.
- Call the Department of Public Health at 1-800-532-9571 or EPA at 1-800-424-LEAD for health information.

Important Lead Information from EPA

Infants and young children are typically more vulnerable to lead in drinking water than the general population. It is possible that lead levels in your home may be higher than in other homes in the community as a result of materials used in your home's plumbing. Infants and children who drink water containing lead in excess of the Action Level could experience delays in their physical or mental development. Children could show slight deficits in attention span and learning abilities. Adults who drink this water over many years could develop kidney problems or high blood pressure. If you are concerned about lead levels in your home's water, you may wish to have your water tested and flush your tap until after the water is cold before using.

testing every step of the way

Tests before treatment

We test the water as it leaves the reservoir to see how well protected our watershed is. Test results show that few contaminants are found in the reservoir water. The few that are found are in very small amounts, well below EPA's standards.

Turbidity (or cloudiness of water) is one measure of overall water quality. Typical levels at Wachusett Reservoir are 0.4 NTU (Nephelometric Turbidity Units). In 2005, turbidity was always below both EPA's standard of 5.0 NTU and the stricter Massachusetts standard of 1.0 NTU, with the highest level at 0.73 NTU.

MWRA also tests reservoir water for pathogens – such as fecal coliform, bacteria, viruses, and *Cryptosporidium* and *Giardia*. They can enter the water from animal or human waste. All test results were well within state and federal testing and treatment standards.

Tests after treatment

EPA and State regulations also require many water quality tests after treatment to check the water you are drinking. MWRA follows – and even goes beyond – these tests. We conduct tens of thousands of tests per year. This testing allows us to better monitor your water.

Tests in community pipes

MWRA and local water departments test 300 to 500 water samples each week for total coliform bacteria. Total coliform

bacteria can come from the intestines of warm-blooded animals, or it can be found in soil, plants, or other places. Most of the time, these bacteria are not harmful. However, their presence could signal that harmful bacteria from fecal waste may be there as well. The EPA requires that no more than 5% of the samples in a given month may be positive for total coliform. If a water sample tests positive for total coliform, we run more specific tests for *E.coli*. *E.coli* is a pathogen found in human and animal fecal waste and may cause illness.

How did we do in 2005?

The table reports test results from 30 communities that receive all of their water from MWRA. Total coliform were found in 2 communities. No *E.coli* was found in any MWRA community in 2005. *One community exceeded the EPA standard. (Residents of Southborough should read their community letter on page 7 for more information.)

Total Coliform Results		
Community	Highest % of positive samples and month	Violations of EPA's 5% limit
Framlingham	1.3% (October)	No
Southborough*	15% (July)	Yes
MWRA Transmission Line	1.6% (August)	No

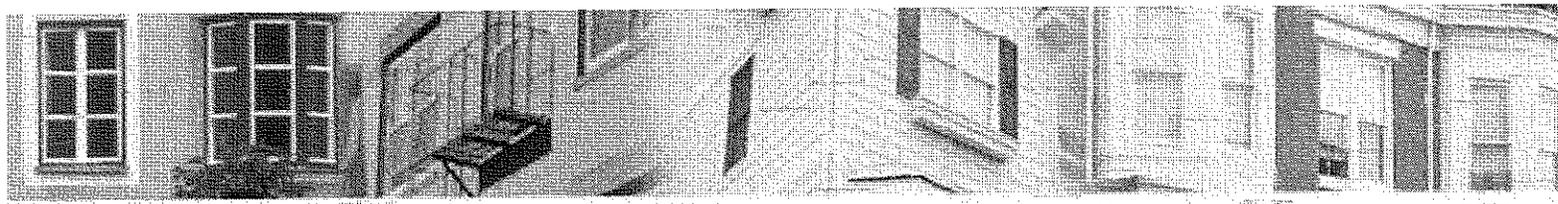

WHAT DOES THIS TABLE TELL ME? EPA requires that we test for over 120 contaminants. For a complete list, go to www.mwra.com. MWRA found only those noted in this report. WHAT IS THE BOTTOM LINE? The water quality is excellent. All of the levels are below EPA's allowable limits.

Reservoir Water Test Results - After Treatment							
Compound	Units	(MCLG) Ideal Goal	(MCL) Highest Level Allowed	(We found) Detected Average	Violation	Range of Detections	How it gets in the water
Barium	ppm	2	2	0.01	No	0.006-0.011	Common mineral in nature

Halooacetic Acids-5	ppb	0	60	40.5	No	0.6-116	Byproducts of water disinfection

KEY: MCL=Maximum Contaminant Level - The highest level of a contaminant allowed in water. MCLs are set as close to the MCLGs as feasible using the best available technology. MCLG=Maximum Contaminant Level Goal - The level of contaminant in drinking water below which there is no known or expected risk to health. MCLGs allow for a margin of safety. ppm=parts per million ppb=parts per billion Avg=Average nd=not detected

*Per DEP requirements, the maximum result is reported for nitrate and nitrite, not the average.

^In over 10 years of testing, cyanide was never found anywhere in the MWRA water supply. It was detected in December 2005. MWRA is investigating lab method interference as the potential source.

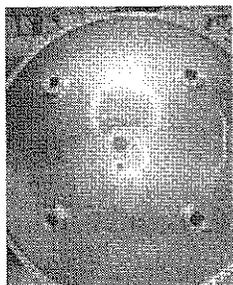

from the reservoir to your home

MWRA's New Water Treatment

As of July 2005, the water you drink is now treated at the new John J. Carroll Water Treatment Plant in Marlborough. The Carroll Plant uses ozone instead of chlorine to kill any pathogens (germs). This new treatment allows MWRA to meet current and tougher future state and federal water quality standards.

Water Treatment Steps - Carroll Water Treatment Plant

The first treatment step is primary disinfection of reservoir water. MWRA's licensed treatment operators carefully add measured doses of ozone gas bubbles to the water to kill any germs that may be present in the water. Next, the water chemistry is adjusted to reduce corrosion of lead and copper from home plumbing (see page 5). Fluoride is then added to reduce cavities. Last, we add chloramine, a mild and long lasting disinfectant combining chlorine and ammonia, which protects the water while it is in the local pipelines.

WHAT IS OZONE?

Ozone consists of three atoms of oxygen. It is created by applying an electrical current to oxygen in a specially designed chamber.

Ozone provides better

disinfection than chlorine alone, especially against *Cryptosporidium* and other hard to kill germs. It also reduces the amount of potentially harmful chlorination byproducts.

MWRA's Improvement to Water Supply

MWRA has nearly completed its \$1.7 billion Integrated Water Supply Improvement Program. The projects are the largest investments made in the water system since the Quabbin Reservoir was constructed in the 1930s. These improvements ensure that MWRA has made the necessary investments to maintain and upgrade its facilities, so that it can deliver quality water directly to customers' taps 24 hours a day, seven days a week at less than a penny per gallon.

- **METROWEST WATER SUPPLY TUNNEL (2003)**
The tunnel is the backbone of the MWRA water system connecting the Carroll Water Treatment Plant to the greater Boston area.
- **WATER STORAGE TANKS (2004)**
Five new tanks have replaced MWRA's older open distribution reservoirs protecting water safety. The cornerstone is the Norumbega Storage Tank in Weston – one of the largest covered storage tanks in the world.
- **JOHN J. CARROLL TREATMENT PLANT (2005)**
Modern water treatment using ozone.

MWRA is still working to improve the system. A covered storage tank in the Blue Hills area should begin construction this year. MWRA and local water departments continue to work to replace, clean, and reline both MWRA and locally owned older pipes to maintain the water's high quality all the way to the tap.

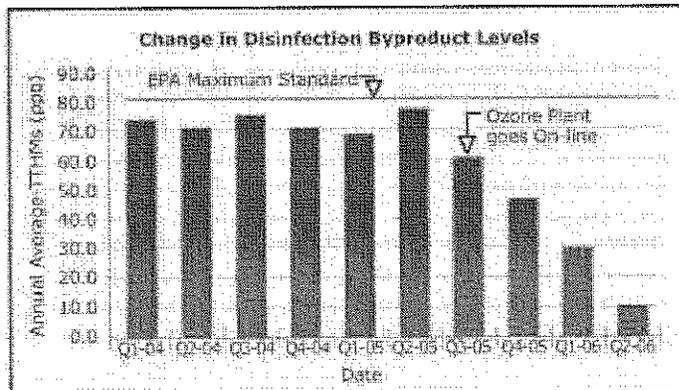

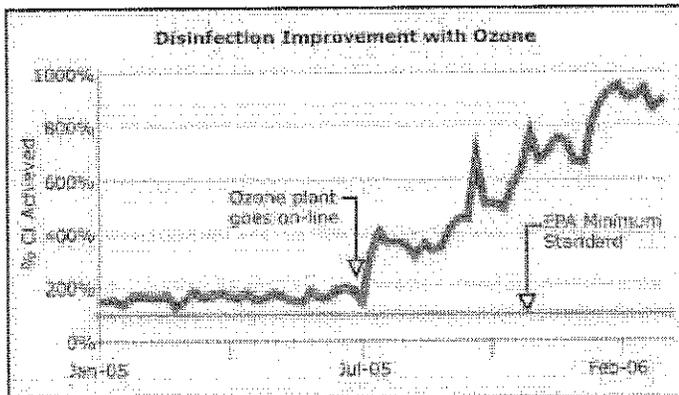

HAVE YOU NOTICED A CHANGE IN THE TASTE OF YOUR WATER?

Water quality complaints from our customers are at an all time low since the start of the new ozone treatment plant. Call or e-mail us and let us know what you think about the new taste.

RESULTS FROM TREATMENT INVESTMENT

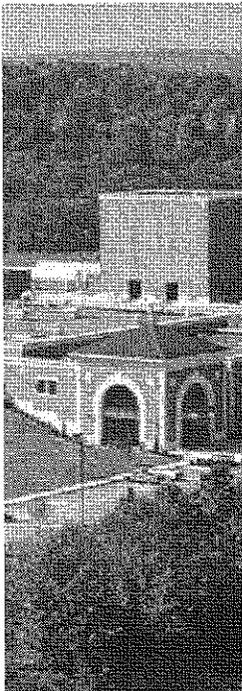

The two charts below show how the new ozone treatment provides better disinfection while reducing the byproducts of chlorination.

Dear Customer:

The Massachusetts Water Resources Authority is pleased to send you the annual report on your drinking water quality. The report contains important information about the water we deliver to your home. Under strict federal and state guidelines, the MWRA and your local water department test thousands of water quality samples each week. The results for 2005 are excellent. MWRA again met every standard for the 120 contaminants we test for each year.

With the start-up of the new, state-of-the-art John J. Carroll Water Treatment Plant in July 2005, your water is better than ever. MWRA now uses ozone gas - a powerful disinfectant - that provides better disinfection without the by-products of chlorine. The new treatment plant ensures strong protection against microbes and viruses, improved clarity, and taste and odor controls. We are pleased that people have noticed the improved taste since the plant came on-line.

I am also pleased to report that the lead test results for 2005 and the first half of 2006 show that system-wide, MWRA was below the federal Lead Action Level. However, some individual communities had more than one home above the Action Level. If you live in one of those communities, your town's letter on page 7 will provide you with additional information. It is important to remember that lead is not in the source water, but can enter the water through some household plumbing that contains lead. Please read page 5 to learn what MWRA is doing to help reduce lead at the tap and what you can do to reduce lead exposure in your home.

I hope you will take a few moments to read this report. The Board of Directors and the men and women of the MWRA take pride in being the stewards of one of the greatest water systems in the country. We want you to have confidence we have in the water we deliver to over 2 million customers. Please contact us if you have any questions or comments about your water quality, or any of MWRA's programs.

Sincerely,

Frederick A. Laskey
Executive Director

Please remember not to limit your view of the problem to individual units only. Mold and mildew can grow in common areas, which can also affect residents' health. If a complaint is received and you are not sure what action should be taken, consult with your supervisor, regional manager, or insurance manager immediately for direction.

In addition to the above procedures, all mold related complaints/incidents should be immediately reported to your supervisor as well as to the Insurance Manager within 24 hours. Supervisors and Managers should use the incident report that is currently used for all other insurance related issues.

TIM BIERCZ

PROJECT MANAGER

EDUCATION Bachelor of Natural Resource Management and Applied Ecology
Cook College, Rutgers – The State University of New Jersey
New Brunswick, New Jersey

ACCREDITATIONS OSHA 40-hour HAZWOPER Training
USEPA-AHERA Certified Asbestos Inspector

SUMMARY OF QUALIFICATIONS

Mr. Biercz has experience performing Phase I Environmental Assessments, Phase II Subsurface Investigations, and Regulatory Compliance Assessments for industrial, commercial, and residential properties. These assessments involve the researching of historical information, field evaluation, interviews, interpreting environmental database reports, identification of potential contamination and liability, and documentation through technical report writing. These environmental assessments also include the interpreting of results from the sampling of asbestos-containing materials, lead-based paints, drinking water, and radon. Mr. Biercz is also experienced in the design, management, and implementation of soil and groundwater sampling projects. Mr. Biercz has also designed and implemented asbestos and lead-based paint operations and maintenance plans.

REPRESENTATIVE PROJECT EXPERIENCE

Landfill Redevelopment – Edison, New Jersey

Mr. Biercz has performed a Phase I Environmental Assessment and environmental document review of a closed landfill located in Edison, New Jersey. The assessment included an evaluation of the prior use of the property, field evaluation, and a review of previous reports for the landfill. Additional document review included the evaluation of applications and plans of a proposed development of the landfill. These documents included: Modification to Landfill Closure and Post-Closure Care Plan, Joint Application for Upland and Waterward Waterfront Development Permit, Water Quality Certification, and Coastal Consistency, and an application for the Department of the Army, Army Corps of Engineers Nationwide Permit #14.

Residential Apartments – Hartford, Connecticut

Mr. Biercz performed a Phase II Subsurface Investigation at a residential apartment building with a removed underground storage tank (UST). The on-site subsurface evaluation was to determine the presence or absence of soil and/or ground water contamination at the property. Mr. Biercz supervised the collection of soil samples, in the vicinity of the UST, utilizing Geoprobe technologies. Mr. Biercz also supervised the collection of groundwater samples utilizing temporary well points.

Commercial Office Building – Medford, Massachusetts

Mr. Biercz performed a Phase I Environmental Assessment of a commercial office building in Medford, Massachusetts. The assessment included the investigation of prior uses of the property and the evaluation of remedial actions pertaining to a prior UST release. Reference to the Massachusetts Contingency Plan determined that restrictions set forth in an Activity and Use Limitation for the property satisfied federal, state, and local regulations.

Retail Strip Mall – Garden City, New York

Mr. Biercz performed a Phase II Subsurface Investigation at a retail strip mall with both historic and current dry cleaning activities located on the property. Mr. Biercz supervised the collection of soil and groundwater samples to determine the potential impact of the dry cleaning operations. Samples were analyzed for volatile organic compounds and compared to applicable soil and groundwater standards.

USEPA-AHERA Certified Asbestos Inspector
USEPA-AHERA Certified Management Planner
Assessing, Sampling, Controlling Microbial Contamination in Indoor
Environments
Inspection for Lead Hazards Risk Assessor
Radon Measurement & Mitigation for Commercial & Multifamily Buildings
Society of Environmental Toxicology and Chemistry

SUMMARY OF QUALIFICATIONS

Mr. Carey has experience performing Phase I Environmental Assessments, Phase II Subsurface Investigations, and Regulatory Compliance Assessments for property transactions involving industrial, commercial, and residential properties throughout the United States. Mr. Carey is experienced in the design, management, and performance of soil and ground water sampling projects. Mr. Carey executed environmental evaluations which include: researching historical usage of the property, identifying potential contamination, formulating sampling and analysis plans, interpreting analytical results, and documentation through technical report writing. Mr. Carey has also developed and implemented asbestos, lead-based paint, and radon operations and maintenance plans. In addition, Mr. Carey has addressed facilities' compliance with environmental laws and regulations including New Jersey's Industrial Site Recovery Act (ISRA), the Connecticut Property Transfer Program, the Clean Air Act (CAA), the Clean Water Act (CWA), the Resource Recovery and Conservation Act (RCRA), and the Toxic Substance Control Act (TSCA).

Mr. Carey has research experience in aquatic biochemical toxicology. His research has focused on the elucidation of mechanisms of adaptation to environmental contaminants. Mr. Carey has two published abstracts and has been involved in poster presentations at the annual conference of the Society of Environmental Toxicology and Chemistry.

REPRESENTATIVE PROJECT EXPERIENCE

Retail Mall – Boston, Massachusetts

Mr. Carey performed a Phase I Environmental Assessment of a large shopping mall. Mr. Carey evaluated the potential impacts of tenants such as photo processors and a medical practice. The shopping mall was located on property formerly utilized as a US Military Arsenal. Contamination identified through a review of historical documentation included polychlorinated biphenyls, volatile organic compounds, petroleum hydrocarbons, and radioactive materials.

Residential Resort – East Hartford, Connecticut

Review of aerial photographs and historic documentation revealed that the subject property was part of the town landfill. Mr. Carey also identified an area where the adjacent landfill was draining into wetlands on the subject property. In addition, two heating oil USTs were removed from the property without property soil sampling. Mr. Carey designed a soil and ground water sampling plan to evaluate the potential impacts of the adjacent landfill on the wetland area, as well as the former USTs on the environmental condition of the subject property.

West Chester Marriott Hotel – Tarrytown, New York

Mr. Carey supervised the collection of soil and ground water samples in the vicinity of a closed in place UST. Mr. Carey monitored the installation of three ground water monitoring wells around the UST. Mr. Carey was also responsible for the collection of ground water samples from these wells.

Regulatory Compliance Audits (Commercial and Industrial) – Various Locations

Mr. Carey has performed regulatory compliance audits on commercial and industrial facilities for the purpose of assessing compliance with environmental laws and regulations such as the Clean Water Act, the Clean Air Act, the Resource Recovery and Conservation Act, the Toxic Substance Control Act as well as state and local laws and regulations. These audits identified a facility's compliance or non-compliance and recommended viable and cost-effective solutions to attain compliance while avoiding potential financial penalties.

Mr. Billings background includes execution of environmental evaluations involving: Historic research of site usage, potential contamination identification, formulation of sampling and analysis plans, interpretation of analytical results, soil gas surveys, documentation through technical report writing; Resource Conservation and Recovery Act (RCRA) waste characterization; Industrial Waste management Audits; Toxic Substances Control Act (TSCA) Compliance Audits Recyclable Materials Research. Mr. Billings has completed 40-hour OSHA training and has performed infield testing on numerous occasions.

Mr. Billings has overseen and performed Hundreds of Phase I Environmental Assessments for HUD as well as HUD MAP Phase I Environmental Assessments.

Mr. Billings has also been involved with NEPA studies including Environmental Impact statements, Environmental Assessments, and Categorical Exclusions.

Mr. Billings has been specifically involved in performing HUD MAP Environmental Assessments in Arkansas, Illinois, New York, Indiana, Ohio, Colorado, Kentucky, Massachusetts, New Jersey, Maryland, South Carolina, Washington, Texas, California, Idaho, Oregon, and Rhode Island and overseen others.

Mr. Billings technically reviewed and developed the Environmental Scope of services and guide for Federal Home Loan Bank of Boston which follows the HUD MAP scope but has specific requirements for each of the New England states.

In addition to the Phase I Environmental Assessments for HUD, Mr. Billings has performed and overseen thousands of assessments for Fannie Mae and Freddie Mac.

Mr. Billings has also performed and overseen well over 10,000 Phase I Environmental Assessments in the last 10 years in all 50 states.

Mr. Billings has also performed Phase II Subsurface Investigations for HUD and asbestos consulting.

The below information relates to Mr. Billings' large Superfund scale remediation and investigation experience:

REPRESENTATIVE PROJECT EXPERIERNCE

Front Royal, VA- NPL Site

Performed a review and evaluation of past environmental studies and remedial efforts undertaken at a large-scale industrial facility. Performed TSCA and site evaluations for bankruptcy court appointed trustee. Evaluations also included development of cost effective work plans for site remediation and power grid consolidation, saving approximately \$276,000 per year in electricity costs.

Marcus Hook, PA- NPL Site

Assisted in development of a detailed work plan for the removal of friable asbestos materials and developed a detailed work plan addressing PCB concerns on behalf of a client under an EPA administrative order at this site. Developed and implemented sampling and analysis plan for PCB contamination. EPA approved a cost-effective remediation plan encapsulating PCB contamination and foregoing supplementary sampling and analysis.
